

SUMMER 2026 / OFFICIAL EXAM PAPER

Final Demo Round

Design and demonstrate a production-ready solution for a real hackathon operations challenge.

CHALLENGE THEME

Trustworthy Judging at Scale

Build a clear, resilient workflow that helps coordinators, judges and competing teams move from submission to a defensible final result.

4 hours

Build and prepare

7 minutes

Live product demo

3 minutes

Judge Q&A

Challenge brief

02 / 03

A hackathon can have hundreds of submissions, multiple tracks and judges with different scoring habits. The final result must be fast, explainable and safe from accidental overwrites or incomplete reviews.

01 Your mission

Create a working product that improves one critical part of the judging lifecycle while preserving a complete and understandable audit trail.

02 Required capabilities

1. Show the current state of every submission and the next action required.
2. Prevent final publication when required scoring or review work is incomplete.
3. Support a clear resolution path for ties, conflicts or exceptional cases.
4. Give teams a concise, read-only view of their submitted work and result status.
5. Record important coordinator actions with actor, timestamp and outcome.

03 Product constraints

Usability

A first-time coordinator must understand the main workflow without training.

Reliability

Handle refreshes, duplicate actions and stale data without corrupting results.

Security

Respect role boundaries and never expose another team's private submission data.

Evidence

Use realistic data and demonstrate at least one blocked or failure state.

Teams may use any approved technology stack. Internet access and external APIs are allowed, but the live demo must still show a useful fallback when an external dependency is unavailable.

Submission and scoring

03 / 03

04 Deliverables

- Source repository with setup instructions and seeded demo data.
- Deployed demo URL or a reliable local demonstration package.
- Architecture summary covering data flow, permissions and failure handling.
- Three-minute pitch deck with problem, solution, evidence and next step.

05 Evaluation rubric

CRITERION	WHAT JUDGES LOOK FOR	WEIGHT
Problem fit	Clear understanding of real judging pain	20%
Product quality	Coherent workflow and polished usability	25%
Technical execution	Correctness, reliability and security	25%
Innovation	Useful differentiation backed by evidence	15%
Demo and Q&A	Working proof, clarity and strong answers	15%

06 Round rules

- Only work created by registered team members may be submitted.
- Open-source libraries and AI tools are allowed and must be disclosed.
- Judges may request a live walkthrough of any claimed feature.
- Late or inaccessible deliverables may not be evaluated.
- The coordinator's published schedule and announcements take precedence.

Submission deadline: 28 June 2026, 23:59 (Asia/Bangkok). Confirm every deliverable in the Event Competing page before the round closes.
